

During the current crisis, some of our members of staff decided to have an online race. They discussed the results on a video chat but Skype kept freezing. I never found out the result, but I did pick up some useful information.

From something I heard him say, it appeared that Mr Parry was not first or third. Mr Lee couldn't resist boasting he was two places above Mr Beerjeraz. I also found out that Mr Hewitt was two places below Mr Parry.

In what order did Mr Beerjeraz, Mr Parry, Mr Lee and Mr Hewitt come in their race?

If Mr Parry was not first or third, he was second or fourth

1

2 Mr P?

3

4 Mr P?

Mr Hewitt was two places below Mr Parry so we know. Mr Parry was second and Mr Hewitt fourth.

1

2 Mr P

3

4 Mr H

As Mr Lee was two places above Mr Beerjeraz they were first and third respectively.

So the final solution:

1 Mr Lee

2 Mr Parry

3 Mr Beerjeraz

4 Mr Hewitt
