Fast 5

4525 – 245 =   156 ÷ 6 =

30% of 4580

762 x 45   3/5 of 70

4525 − 245 = 4280   156 ÷ 6 = 26

30% of 4580 = 1374

762 x 45 = 34290   3/5 of 70 = 42

Can I answer addition problems?

How would we solve this problem?

$$\boxed{} = 6{,}000 + 90$$

The question is just 6000+90 written in a different order than we're used to.

6090 = 6,000 + 90

This is a place value question using addition

$$826 = 800 + \boxed{} + 6$$

If our number is 826 and we have 800 and 6, we can see that the only number missing is 2, which is in the 10s column, so we can record it as 20.
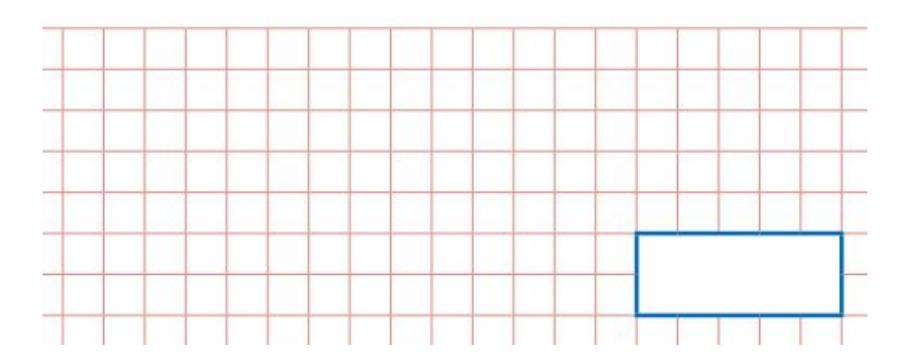

$$826 = 800 + \boxed{20} + 6$$

There is a method for answering this question that doesn't use addition

$$\boxed{} + 5 = 341$$

If we have one of the numbers in a calculation and the answer, we can use our understanding of Fact Families to find the answer. We can do 341-5 to find our answer.

341 – 5 = 336. We can even do 336 + 5 to double check.

$$\boxed{336} + 5 = 341$$

Some questions will be laid out clearly and we can just answer them normally.

$56.38 + 24.7 =$

56.38 + 24.7 =

$$
\begin{array}{r}
5\,6\,.\,3\,8 \\
2\,4\,.\,7 \quad + \\
\hline
8\,1\,.\,0\,8 \\
{}^{1}\,{}^{1}
\end{array}
$$
