

Summer Week 2 - English Lesson 4

Can I link subheadings to information?

Red - Match the subheadings underneath with the paragraphs. Use the pictures next to the paragraphs to help you.

The amazing animals of the USA

- a) These animals are very large and can be deadly when they use their sharp, pointy antlers. They are normally brown or black and have hooves to help them run quickly over the ground.

- b) Bison can only be found in North America, but a hundred years ago they were nearly extinct. This is because hunters used their fur and meat for warmth and food. Luckily, the species came back and there is now a big population living in and around Yellowstone National Park.

- c) There are two types of these animals in the USA - the black bear and the grizzly bear. A black bear is smaller than a grizzly bear, but is no less fearsome. Grizzly bears have longer snouts and longer fur. Both bears eat fish, insects and plants.

- d) You can find these animals all over the world, but in the USA they are found only in the western states. They can survive in many habitats, such as in woodlands but also on snowy plains.

Subheadings to choose from:

- 1) A wolf's habitat.
- 2) What does it look like?
- 3) The history of this fantastic animal.
- 4) What is the difference between these furry beasts?
