

**Can I divide three and
four digit numbers by a
single digit?**

Fast 5

$$47 \times 11 =$$

$$400 \div 20 =$$

$$1000 - \boxed{} = 369$$

$$-21 + 48 =$$

Number of
edges on a
cube

Fast 5

$$47 \times 11 = 517$$

$$400 \div 20 = 20$$

$$1000 - \boxed{631} = 369$$

$$-21 + 48 = 27$$

Number of
edges on a
cube 12

$$157 \div 3 = 157$$

$$\begin{array}{r} 157 \\ \hline 3 \overline{) 4^1 7^2 1} \end{array}$$

$$\begin{array}{r} 144 \text{ Remainder } 1 \\ 3 \overline{) 4136} \end{array}$$

As previously, we have divided the number but there is a remainder that we cannot divide. What does this mean as mathematicians?

	1	4	4	Remainder 1
3	4	¹ 3	¹ 6	

If we are building trikes, we have 144 trikes and one wheel left. Can we have a one wheeled trike?

	1	4	4	Remainder 1
3	4	¹ 3	¹ 6	

If we are building trikes, we have 144 trikes and one wheel left. Can we have a one wheeled trike?

No! so the answer is 144. We round down.

	1	4	4	Remainder 1
3	4	¹ 3	¹ 6	

If we were taking Year 5 on a trip to the dry ski centre and we had 144 cars, could we leave one child behind?

	1	4	4	Remainder 1
3	4	¹ 3	¹ 6	

If we were taking Year 5 on a trip to the dry ski centre and we had 144 cars, could we leave one child behind?

No! so the answer is 145. We round up.

I have a bottle of medicine for my cat.
The bottle contains 864 ml of medicine.
How many doses can my cat have from this bottle
if a dose is 5 ml?

I have a bottle of medicine for my cat.
The bottle contains 864 ml of medicine.
How many doses can my cat have from this bottle
if a dose is 5 ml?

$$\begin{array}{r} 172 \text{ r}4 \\ 5 \overline{) 864} \end{array}$$

Using the calculation, what is the answer to the question?

I have a bottle of medicine for my cat.
The bottle contains 864 ml of medicine.
How many doses can my cat have from this bottle
if a dose is 5 ml?

$$\begin{array}{r} 172 \text{ r}4 \\ 5 \overline{) 864} \end{array}$$

You can't have a remainder of a dose. You can't give a dose that is not complete. The answer has to be rounded down. **172 doses.**

A farmer has 378 apples. If he has to share them between three different supermarkets, how many apples will each supermarket get?

A farmer has 378 apples. If he has to share them between three different supermarkets, how many apples will each supermarket get?

$$\begin{array}{r} 126 \\ 3 \overline{) 378} \end{array}$$

Using the calculation, what is the answer to the question?

A farmer has 378 apples. If he has to share them between three different supermarkets, how many apples will each supermarket get?

$$\begin{array}{r} 126 \\ 3 \overline{) 378} \end{array}$$

No remainder, so the answer is **126 apples.**

I can write 6 words on a page. How many pages do I need to write a story of 735 words?

I can write 6 words on a page. How many pages do I need to write a story of 735 words?

$$\begin{array}{r} 122 \text{ r}3 \\ 6 \overline{) 735} \end{array}$$

Using the calculation, what is the answer to the question?

I can write 6 words on a page. How many pages do I need to write a story of 735 words?

$$\begin{array}{r} 122 \text{ r}3 \\ 6 \overline{)735} \end{array}$$

You can't have a remainder of a page. If you have fewer pages you don't have the whole story. We round up - **123 pages.**
