

Year 5 Week 9 Lesson 4 Questions

Can I interpret a line graph?

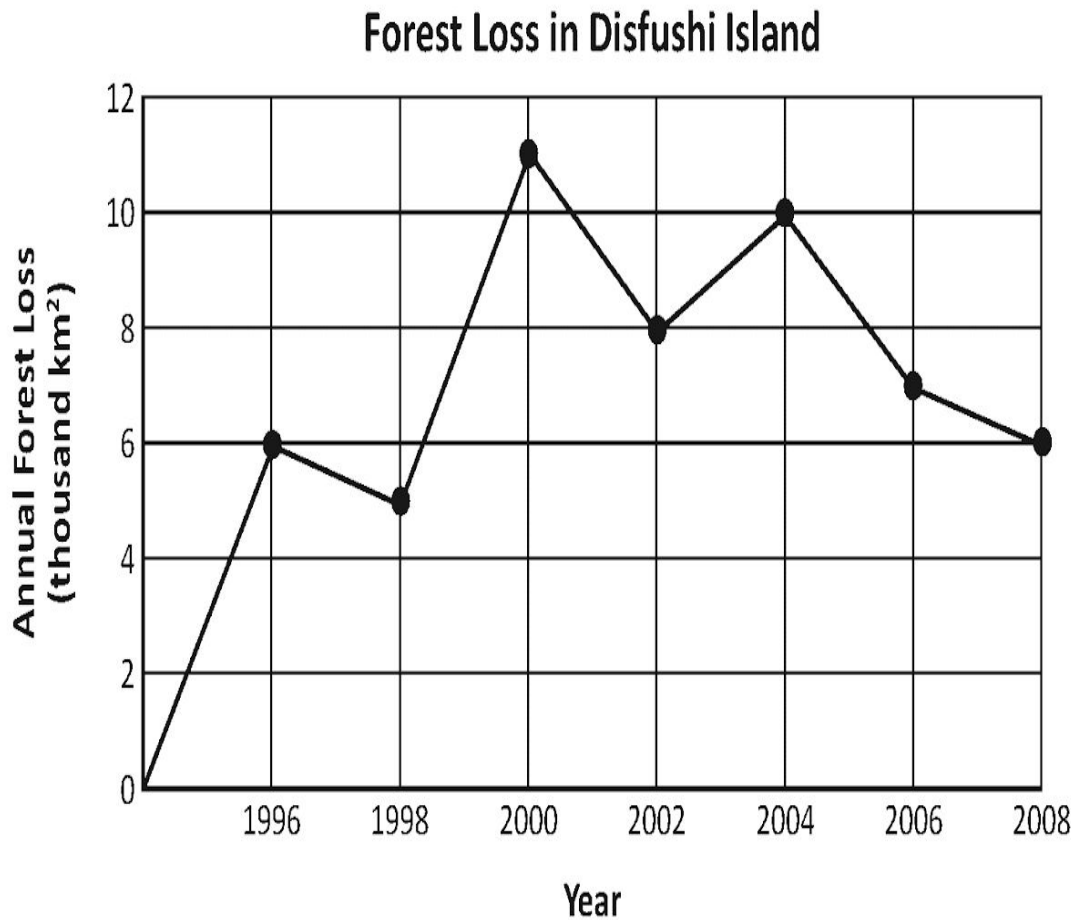

RED

1. In which year was the most forest lost?
2. In which year was 10000km² lost?
3. What was the difference between the amount of forest lost in 2002 and 2008?
4. How much forest was lost in 1998?
5. What was the difference between the forest lost in 1998 and 2006?
6. Estimate how much forest was lost in 1999 and 1996 combined.
7. Can you think of any questions of your own?

YELLOW

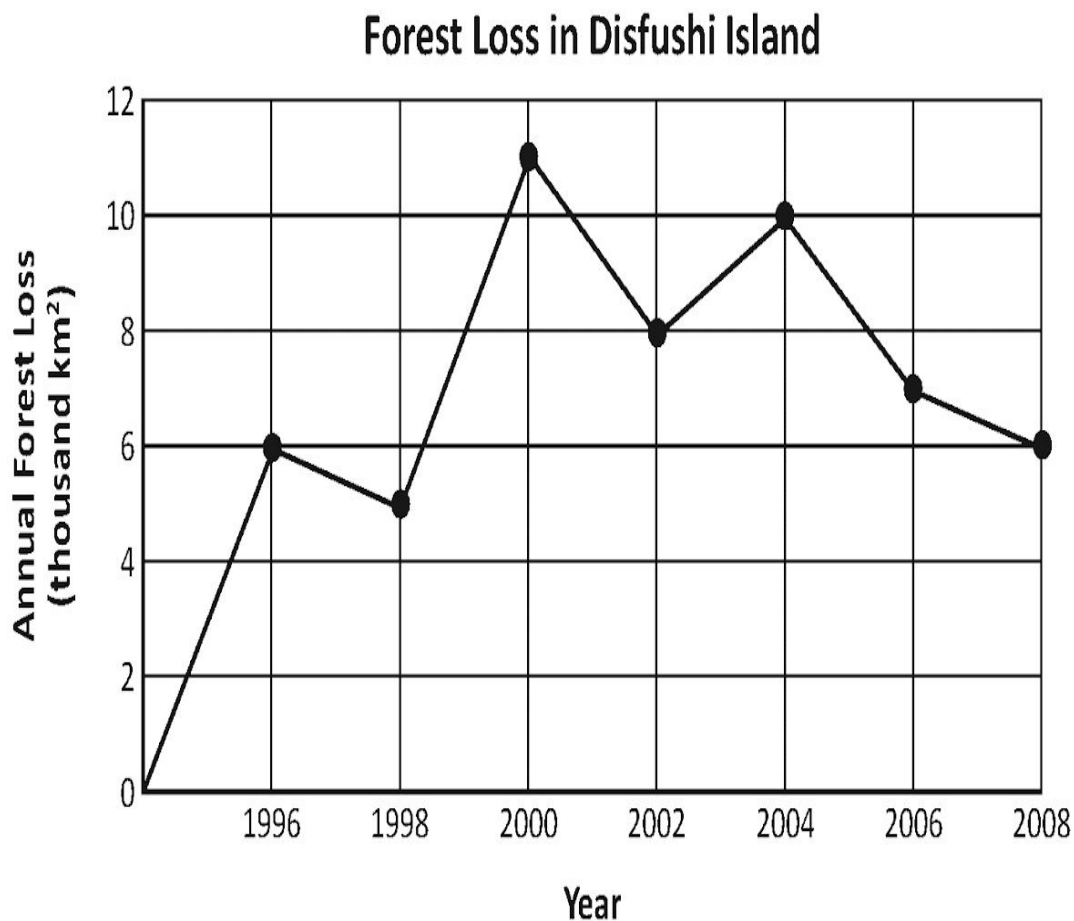

The amount of forest lost was recorded every two years.

1. How much forest was lost in 1998?
2. What was the difference between the forest lost in 1998 and 2006?
3. Estimate how much forest was lost in the years 1999 and 1996 combined.
4. What was the difference between the most forest lost in one year and the least forest lost in one year from 1996 onwards?
5. In which two '**recorded**' years was the same amount of forest lost?
6. In which '**recorded**' years was forest loss greater than 7000km²?
7. Can you think of any questions of your own?

GREEN

The amount of forest lost was recorded every two years.

1. What was the difference between the most forest lost in one year and the least forest lost in one year from 1996 onwards?
2. In which two '**recorded**' years was the same amount of forest lost?
3. In which '**recorded**' years was forest loss greater than 7000km²?
4. Estimate how much forest was lost in 2003.
5. Estimate the difference in the amount of forest lost in the years 2003 and 1999.
6. Between which years did the amount of forest lost per year increase the most?
7. Can you think of any questions of your own?
